Personal Statement

Motivated software development student with experience in programming, embedded systems, and full-stack development through both academic study and personal projects. Experienced developing applications using Python, C#, JavaScript, HTML/CSS, and C++, with a particular interest in object-oriented programming, APIs, and hardware-integrated software systems. Recently completed a software development placement at QinetiQ while independently developing Raspberry Pi and ESP32-based projects.

Skills

Technical Skills

- Python, C#, C++, Kotlin, JavaScript, HTML, CSS, SQL
- Object-Oriented Programming (OOP)
- Embedded systems development using ESP32 and Arduino
- REST APIs and JSON data handling
- Raspberry Pi and Linux environments
- Git and version control
- Basic computer vision development

- Unity Engine
- Android app development using Kotlin and Jetpack Compose

Transferable Skills

- Communication
 - Teamwork
 - Problem Solving
 - Time Management
 - Leadership
-

Education

T-Level in Digital Production, Design and Development- *Farnborough College of Technology*

Farnborough, Hampshire | Sep 2024 – June 2026

- Overall Grade: Distinction
- Developing practical experience in software development, object-oriented programming, databases, and web technologies.
- Completed a software development industry placement at QinetiQ.

Additional Certifications

- Cisco Networking Academy:
 - Junior Cybersecurity Analyst Career Path
 - IT Essentials

GCSE's- *King's Academy Easthampstead Park*

Bracknell, Berkshire | Sep 2019 – June 2024

8 GCSEs including Maths (9), Combined Science (9-8), and Computer Science (7)

Projects

ESP32 Environmental Sensor Hub

- Developed an ESP32-based sensor hub in C++ for collecting and serving environmental data through REST-style APIs.
- Worked with modular architecture, asynchronous tasks, hardware communication, and Git-based version control.

E-Paper Desktop Display

- Designed and programmed a low-power desktop display using Raspberry Pi and e-paper technology.
- Developed software to retrieve and display live information from APIs and local services.
- Worked with hardware integration, UI layout design, and display optimisation.

Computer Vision Maze Robot (*ongoing project*)

- Developing a self-driving maze robot using a Sphero Mini and Python implementing initial object tracking using OpenCV for real-time robot position detection.
- Currently developing maze recognition and pathfinding systems, with plans to explore AI-based maze solving and autonomous navigation.

Work Experience

Software Development Industry Placement - QinetiQ

Farnborough, Hampshire | May 2026 – July 2026

- Supported software development activities as part of a professional engineering environment.
- Worked collaboratively with developers and other team members to complete technical tasks and solve problems.
- Gained experience using industry-standard tools, workflows, and development practices.
- Adapted quickly to new technologies and independently developed understanding of unfamiliar systems.
- Demonstrated professionalism, communication, and attention to detail while working in a secure workplace environment.

Lifeguard - Coral Reef Waterworld

Bracknell, Berkshire | Sep 2024 – Present

- Worked collaboratively as part of a team to respond effectively to emergencies.
- Maintained high standards of supervision and hygiene on and off poolside to ensure a safe environment.
- Helped customers through clear communication, providing guidance and support.

Young Leader – Scouts UK

Bracknell, Berkshire | Jan 2023 – Present

- Planned and led engaging activities for groups of 20+ young people.
- Supported the running of events, including assisting in risk assessing activities.
- Developed communication and leadership through engagement with the community.
